SUMMARY

Data analyst with 5+ years in BI and analytics across fintech, education and manufacturing. First data hire at a PIX/crypto payments company, where I built the data function from scratch: pipelines, revenue metrics and dashboards. Strongest at turning messy, multi-source transactional data into numbers leadership can trust, and at explaining why a number moved.

EXPERIENCE

Data Analyst | Truther RezolvePay (PIX & crypto payments) **Jun 2025 - Present**
Remote

- First data professional in the company; built the data function from the ground up: pipelines, metric definitions, dashboards and recurring reports.
- Built Python/SQL ETL pipelines consolidating crypto, PIX and banking data into PostgreSQL on AWS, through a year of **2.6x volume and 3.5x transaction growth** (2025 vs. 2024).
- Defined and modeled revenue, fee and take-rate metrics by product and payment rail (PIX: 97% of volume), the reference numbers for business and product decisions.
- Tracked the sign-up to KYC funnel and active-user growth (**+49% year over year**).
- Reconciled conflicting figures across databases, tracing each discrepancy to its source before it reached a report.
- Published a public case study on masked company data, pix-analytics-portfolio.streamlit.app: 4 Streamlit dashboards with cohorts, scenario ranges, break-even and a plan-vs-actual check that traced a 2.6x forecast miss to one volume assumption; found two errors in the financial model along the way.

Data Analyst | Vitru Education **Aug 2023 - Jun 2025**
Florianópolis, Brazil (Hybrid)

- Tracked budget vs. actual and the annual guidance at a publicly listed digital-education group (**~R$ 2B net revenue, 800K+ students, ~2,500 learning hubs**); 2024 adjusted EBITDA (R$ 794M) closed in line with guidance.
- Owned KPI tracking and forecasting used in planning and performance monitoring.
- Consolidated and cleaned data from multiple sources into a single actual-vs-plan view across indicators.
- Wrote executive reports explaining significant budget variances and the action plans behind them.

Business Intelligence Analyst | Komeco S.A. (manufacturing) **Jun 2021 - Aug 2023**
Palhoça, Brazil (Hybrid)

- Unified 42 performance indicators from unstructured TOTVS ERP data into one Power BI dashboard (SQL, Excel).
- Built projection models for supply chain visibility and performance management.
- Created a supplier negotiation funnel, using international market data, to support sourcing decisions.

Data Analyst Intern | Cottonbaby **May 2018 - Jun 2020**
São José, Brazil

- Built CRM-based lead tracking and funnel analysis for visibility into conversion and commercial performance (Sankhya ERP, SQL, Excel, Power BI).

Business Intelligence Intern | Brognoli Negócios Imobiliários **Aug 2016 - May 2017**
Florianópolis, Brazil (Part-time)

- Sales and operations reporting and performance monitoring.

SKILLS

Data: SQL, Python (pandas), PostgreSQL, ETL pipelines, data modeling, AWS, Git/GitHub
BI & visualization: Power BI, Streamlit, Plotly, Excel
Analytics: KPI design, forecasting, budget vs. actual / FP&A, variance analysis, revenue & unit economics, cohort analysis
Other: TOTVS and Sankhya ERP, AI-assisted development (Claude Code)
Languages: Portuguese (native), English (professional working proficiency)

EDUCATION

Bachelor's in Information Science | Federal University of Santa Catarina (UFSC) 2019 - 2024
BI Tools for Data Science | Data Science Academy 2021 - 2022
